

Camp STIX HbA1C Policy

Background: Camp STIX is a place where all children are accepted and we foster a community of Support, Tradition, Information and X-citement. Part of living up to the mission is all staff being good role models for campers; both in personal conduct and in diabetes management. The healthcare providers in this community are dedicated to the year-round health of campers, counselors, and all staff who are part of the Camp STIX family.

Policy: All camp staff will have a maximum HbA1c of 10 or a recent decrease of 4 or more percent leading up to camp. The Camp STIX leadership team reserves the right to execute this policy as appropriate.

If you are concerned this policy will exclude you from camp, please contact the STIX Medical Director at campstixmash@campstix.org. We are all here to help you live your healthiest life.
